

## X-13ARIMA-SEATS Quick Reference for DOS

Accessible Version 1.1

September 10, 2013

### Running X-13ARIMA-SEATS on a single series:

`{path1}\x13as {-i} {path2}\filename`

where:

<code>{-i}</code>	: optional flag that informs X-13ARIMA-SEATS that the named file is an input specification file
<code>{path2}\ filename.spc</code>	: input specification file
<code>{path2}\ filename.html</code>	: main output file
<code>{path2}\ filename_err.html</code>	: error file
<code>{path2}\ filename_log.html</code>	: log file, which gives a summary of user-selected diagnostics
<code>{path1}\</code>	: path information for the X-13ARIMA-SEATS program (optional)
<code>{path2}\</code>	: path information for the X-13ARIMA-SEATS input file (optional)

Example:

`c:\x13as\x13as b:\sales\retail`

Notes:

- (a) Only the filename (and path, if necessary) is specified, not the extension.
- (b) The program uses this filename to form the filename of other files generated by the program.

### Running X-13ARIMA-SEATS on a single series with an alternate output name:

`{path1}\x13as {-i} {path2}\filename1 {-o} {path3}\filename2`

where:

<code>{-i}</code>	: optional flag that informs X-13ARIMA-SEATS that the named file is an input specification file
<code>{path2}\ filename1.spc</code>	: input specification file
<code>{-o}</code>	: optional flag that informs X-13ARIMA-SEATS that the named file is to be used to form the output files
<code>{path3}\ filename2.html</code>	: main output file
<code>{path3}\ filename2_err.html</code>	: error file
<code>{path3}\ filename2_log.html</code>	: log file, which gives a summary of user-selected diagnostics
<code>{path1}\</code>	: path information for the X-13ARIMA-SEATS program (optional)
<code>{path2}\</code>	: path information for the X-13ARIMA-SEATS input file (optional)
<code>{path3}\</code>	: path information for the X-13ARIMA-SEATS output file (optional)

Example:

`c:\x13as\x13as b:\sales\retail b:\sales\retail2`

Notes:

- (a) Only the filename (and path, if necessary) is specified, not the extension.
- (b) The program uses the alternate filename to form the filename of other files generated by the program.

### Handling spaces in file names for a single series:

`{path1\}x13as {-i} "{path2\}filename"`

where:

`{path2\} filename.spc` : input specification file, enclosed in quotation marks ("  
`{path1\}` : path information for the X-13ARIMA-SEATS program (optional)  
`{path2\}` : path information for the X-13ARIMA-SEATS input file (optional)

Example:

`c:\x13as\x13as "b:\US sales\NE retail"`

Notes:

- (a) The opening and closing quotation marks must fully contain the filenames with no extra spaces, and that there are matching opening and closing quotation marks for each file.
- (b) Quotation marks can be used to handle spaces in the alternate output filename as well.

### Running X-13ARIMA-SEATS on more than one series (a spec file for every series):

`{path1\}x13as -m {path2\}metafile`

where:

`-m` : flag that informs X-13ARIMA-SEATS that the named file is a metafile  
`{path2\} metafile.mta` : input metafile  
`{path2\} metafile_log.html` : log file, which gives a summary of all the runs for a given metafile  
`{path2\} metafile_mta.html` : metafile index file, which gives links to the output generated by a given metafile  
`{path1\}` : path information for the X-13ARIMA-SEATS program (optional)  
`{path2\}` : path information for the X-13ARIMA-SEATS metafile (optional)

Example:

`c:\x13as\x13as -m b:\sales\allsales`

Notes:

- (a) Only the filename (and path, if necessary) for the metafile is specified, not the extension
- (b) The metafile must have one or two filenames (without extension) per line, separated by a tab or blank spaces. The first filename is the filename of an input specification file. The second (if specified) is the filename used to form the filenames of the output files for the run specified by the corresponding input selection file.
- (c) If only one filename is given on a particular line, the filename of the input specification file is used to generate the names of the output files.
- (d) Up to 500 input files can be specified in a single metafile.

## Running X-13ARIMA-SEATS on more than one series (one spec file run on many series):

`{path1}\x13as {-i} {path2\}filename -d {path3\}metafile`

where:

`{-i}` : optional flag that informs X-13ARIMA-SEATS that the named file is an input specification file  
`{path2\} filename.spc` : input specification file  
`-d` : the flag that informs X-13ARIMA-SEATS that the named file is a data metafile  
`{path3\} metafile.dta` : data metafile  
`{path3\} metafile.log.html` : log file, which gives the summary of all the runs for a given metafile  
`{path3\} metafile_dta.html` : data metafile index file, which gives links to the output generated by a given metafile  
`{path1\}` : path information for the X-13ARIMA-SEATS program (optional)  
`{path2\}` : path information for the X-13ARIMA-SEATS input file (optional)  
`{path3\}` : path information for the X-13ARIMA-SEATS data metafile (optional)

Example:

```
c:\x13as\x13as sales -d b:\sales\alldata
```

Notes:

- (a) Only the filename (and path, if necessary) for the data metafile is specified, not the extension.
- (b) The metafile must have one or two filenames per line, separated by a tab or blank spaces. The first filename is the name of a data file (including the file extension). The second (if specified) is the filename (without extension) used to form the filenames of the output files for the run specified by the corresponding input specification file.
- (c) If only one filename is given on a particular line, the filename of the data file is used to generate the names of the output files.
- (d) The X-13ARIMA-SEATS options given in the input specification file are applied to the data read in from each of the files given in the data metafile.
- (e) Up to 500 data files can be specified in a single data metafile.

## Handling spaces in file names for a metafile run

`{path1}\x13as -m " {path2\} metafile "`

where:

`-m` : flag that informs X-13ARIMA-SEATS that the named file is a metafile  
`{path2\} metafile.mta` : input metafile, enclosed in quotation marks ("  
`{path1\}` : path information for the X-13ARIMA-SEATS program (optional)  
`{path2\}` : path information for the X-13ARIMA-SEATS metafile (optional)

Examples:

```
c:\x13as\x13as -m "c:\US sales\all sales"  
c:\x13as\x13as "airline model" -d "c:\US sales\all sales data"
```

Notes:

- (a) Filenames within the metafile or data metafile can also be surrounded by quotes if they have spaces imbedded in the name of the file.
- (b) The opening and closing quotation marks must fully contain the filenames with no extra spaces, and that there are matching opening and closing quotation marks for each file.
- (c) All other rules for constructing and running metafiles are the same.

## Other options declared at time of execution:

- c : Sum each of the components of a composite adjustment, but only perform modelling or seasonal adjustment on the total.
- g dirname : Store graphics metafile and related files for external graphics in the *dirname* directory.
- n : (No tables) Print only the tables specifically requested in the input specification file.
- q : Run X-13ARIMA-SEATS in “quiet” mode (warning messages not sent to console).
- r : Use reduced output format for table formats and headers.
- s : Store seasonal adjustment and regARIMA model diagnostics in a file.
- v : Check input specification file(s) for errors only; no other processing.
- x : Generates XHTML output.

## Examples:

```
c:\x13as\x13as -i b:\trade\imports -o b:\trade\importsRun2 -s
c:\x13as\x13as b:\trade\imports b:\trade\importsRun2 -s
c:\x13as\x13as -m "g:\EU trade\all exports" -g "g:\EU trade\graph" -q -r
```

## Notes:

- (a) The first two examples are equivalent; when the input specification file is given as the first argument, the -i flag is assumed. When the alternate output filename is given as the second argument, the -o flag is assumed.
- (b) Options can entered in any order (ie, -n -s is treated the same as -s -n).
- (c) The -v flag should not be used with the -s, -c, -n, -r, or -q flags. A warning message will be generated.
- (d) The -c flag can only be used with the -m flag.
- (e) The -m flag cannot be used with the -d flag.
- (f) The -i flag cannot be used with the -m flag.
- (g) The -o flag cannot be used with the -m and -d flags.
- (h) Quotation marks can be used for all filenames that have spaces.

## Specs and arguments for the input specification file

## Notes:

- (a) Every input specification file must have either a **series** spec or a **composite** (for runs where a composite seasonal adjustment is performed) spec.
- (b) The first spec in any input specification file must be either a **series**, **composite**, or **metadata** spec. If the **metadata** spec is the first spec in the input specification file, then the second spec must be either the **series** or **composite** spec.
- (c) The **series** and **composite** specs cannot be used in the same input file.
- (d) For the arguments given below, when two or more values are connected by the symbol |, only one of the values can be assigned to the argument in a given run.
- (e) Dates are specified as either *year.month* for monthly data or *year.quarter* for quarterly data. For monthly series, the months can be denoted either by integers (1 to 12) or by month abbreviations (**jan**, **feb**, **mar**, **apr**, **may**, **jun**, **jul**, **aug**, **sep**, **oct**, **nov**, **dec**). For quarterly series, only integers (1 to 4) are allowed. A zero can be placed in front of integers from 1 to 9 for padding (for example, 2002.02 is an acceptable date specification for February 2002).
- (f) Anything on a line after a number sign (#) is considered a comment and is ignored by the program.
- (g) Spec names, arguments, keywords, and dates are not case sensitive. For example, **SeasonalMA** and **seasonalma** are treated the same.
- (h) Multiple arguments must be enclosed in parentheses. If an argument accepts multiple values but only one is given, then the parentheses are optional. If an argument accepts only a single value, the value must not be enclosed in parentheses.
- (i) Either double or single quotation marks are acceptable for character arguments.
- (j) The **data** and **file** arguments cannot be used in the same spec.
- (k) The **data** and **format** arguments cannot be used in the same spec.

- (l) Only one of the `automdl`, `pickmdl` and `arima` specs can be used in the same input file.
- (m) The `x11` and `seats` specs cannot be used in the same input file, and the `x11regression` spec cannot be used in conjunction with the `seats` spec.
- (n) Change of regime regression variables can be specified for seasonal (`seasonal`), trigonometric seasonal (`sincos`), trading day (`td`, `tdnolpyear`, `td1coef`, `td1nolpyear`, `tdstock`, or `tdstock1coef`), length-of-month (`lom`), length-of-quarter (`loq`), or leap year (`lpyear`) regression variables. When a change of regime is specified for one of these regression variables, the program will add an additional set of regression variables that is defined as usual before the date of the change of regime, and set to zero for those observations on or after the change of regime date. A change of regime regression variable is specified by appending a valid date surrounded by slashes to the name of a regression variable in the `variables` argument of the `regression` spec. For example, to specify a change of regime in trading day starting June of 1985, put `td/1985.jun/` in the `variables` argument of the `regression` spec.
- (o) X-13ARIMA-SEATS will extend the series with one year of forecasts prior to X-11 seasonal adjustment and three years of forecasts prior to a SEATS seasonal adjustment whenever a regARIMA model is specified with no `forecast` spec. The only way to specify a seasonal adjustment without forecast extension when a regARIMA model is specified is to set `maxlead` = 0 in the `forecast` spec.
- (p) The `function` and `power` arguments cannot be used together in the `transform` spec.
- (q) The `x11regression` spec cannot be used for a series with missing data.
- (r) The `b` argument in the `regression` and `x11regression` specs must appear **after** the `variables` and `user` arguments.
- (s) When `0.per` is entered for the ending date of the `modelspace` argument of the `series` or `composite` specs, the ending date of the model span will be set to be the final occurrence of the period `per` in the span of data analyzed (ie, `modelspace=(1980.jan,0.dec)` will set the ending date of the model span to the last December of the data).
- (t) The `diff` and `maxdiff` arguments in the `automdl` specs cannot be used in the same input file; if they are found in the same file, only the values of `maxdiff` will be used.
- (u) The `period` argument of the `series` and `composite` specs can be any number up through 12 , but only certain values (1, 2, 4, 6, and 12 for SEATS, 12 and 4 for X-11) are allowed when performing a seasonal adjustment of the series.
- (v) Arguments which have been designated **Rarely Used Options** in the main documentation are given at the end of each spec, with a “#” as the first character of the line.

Table 3: Tables That Can Be Saved as Percentages in the `save` Argument

<i>name</i>	<i>short</i>	<i>spec</i>	<i>description of table</i>
indadjjustfacpct	ipa	composite	indirect combined adjustment factors expressed as percentages if appropriate
indcalendaradjchangespct	ip8	composite	percent changes in original series adjusted for calendar effects
indirregularpct	ipi	composite	indirect irregular component expressed as percentages if appropriate
indrevsachangespct	ipf	composite	percent changes for indirect seasonally adjusted series with forced yearly totals
indrndsachangespct	ipr	composite	percent changes for rounded indirect seasonally adjusted series
indsachangespct	ip6	composite	percent changes for indirect seasonally adjusted series
indseasonalpct	ips	composite	indirect seasonal component expressed as percentages if appropriate
indtrendchangespct	ip7	composite	percent changes for indirect trend component
origchangespct	ip5	composite	percent changes for composite series
revsachangespct	p6a	force	percent changes in seasonally adjusted series with forced yearly totals
rndsachangespct	p6r	force	percent changes in rounded seasonally adjusted series
adjustfacpct	psa	seats	combined adjustment factors, expressed as percentages if appropriate
irregularpct	psi	seats	final irregular component, expressed as percentages if appropriate
seasonalpct	pss	seats	final seasonal factors, expressed as percentages if appropriate
transitorypct	psc	seats	final transitory component, expressed as percentages if appropriate
adjustfacpct	paf	x11	combined adjustment factors, expressed as percentages if appropriate
calendaradjchangespct	pe8	x11	percent changes in original series adjusted for calendar factors
irregularpct	pir	x11	final irregular component, expressed as percentages if appropriate
origchangespct	pe5	x11	percent changes in the original series
sachangespct	pe6	x11	percent changes in seasonally adjusted series
seasonalpct	psf	x11	final seasonal factors, expressed as percentages if appropriate
trendchangespct	pe7	x11	percent changes in final trend cycle

*Name* gives the name of each plot for use with the **save** arguments.

*Short* gives a short name for the tables of the **save** argument.

*Spec* indicates which spec the tables are defined for.

Table 4: **Components to be Saved in .tbs file**

<i>Code</i>	Description of table
all	all series
xo	original series
n	seasonally adjusted series
s	seasonal factors
p	trend-cycle
u	irregular
c	transitory
cal	calendar
pa	preadjustment factor
cy	cycle
ltp	long term trend
er	residuals
rg0	separate regression component
rgsa	regression component in seasonally adjusted series
stp	stochastic trend cycle
stn	stochastic seasonally adjusted series
rtp	real time trend cycle
rtsa	real time seasonally adjusted series

*Code* gives the code used to specify the series in the **tabtables** argument of the **seats** spec.

Table 5: **Default Critical Values for Outlier Identification**

Number of Observations Tested	Outlier Critical Value	Number of Observations Tested	Outlier Critical Value
1	1.9600	48	3.6273
2	2.2365	72	3.7323
3	2.4449	96	3.8007
4	2.6180	120	3.8508
5	2.7455	144	3.8898
6	2.8433	168	3.9169
7	2.9215	192	3.9217
8	2.9859	216	3.9484
9	3.0403	240	3.9714
10	3.0871	264	4.0093
11	3.1280	288	4.0253
12	3.1643	312	4.0398
24	3.4194	336	4.0529
36	3.5458	360	4.0650

Table 6: **X-13ARIMA-SEATS Files for Special SEATS Saved Output**

<i>SEATS</i> <i>file name</i>	X-13ARIMA-SEATS <i>file name</i>	<i>Contents</i> <i>of file</i>
rogtable.out	filename_rog.html	Selected statistics from the growth rate output
summarys.txt	filename_sum.html	Summary information and diagnostics from SEATS adjustment
table-s.out	filename_tbs.html	Annotated listing of the series, the seasonally adjusted series, and model-based seasonal adjustment components, saved in columns separated by white space

Table 7: **Output Tables for Seats spec That Can Only Be Saved**

<i>Name</i>	<i>Small</i>	<i>Description of table</i>
componentmodels	mdc	models for the components
filtersaconc	fac	concurrent finite seasonal adjustment filter
filtersasym	faf	symmetric finite seasonal adjustment filter
filtertrendconc	ftc	concurrent finite trend filter
filtertrendsym	ftf	symmetric finite trend filter
squaredgainsaconc	gac	squared gain for finite concurrent seasonal adjustment filter
squaredgainsasym	gaf	squared gain for finite symmetric seasonal adjustment filter
squaredgaintrendconc	gtc	squared gain for finite concurrent trend filter
squaredgaintrendsym	gtf	squared gain for finite symmetric trend filter
timeshiftsaconc	tac	time shift for finite concurrent seasonal adjustment filter
timeshifttrendconc	ttc	time shift for finite concurrent trend filter
wkendfilter	wkf	end filters of the Wiener-Kolmogoroff filter

Table 8: **Graphics Metafile Codes**

<b>Code</b>	<b>Description</b>
acf	residual autocorrelations
acf2	squared residual autocorrelations
adjcori	composite series (prior adjusted)
ador	original series (prior adjusted)
ahst	concurrent and revised seasonal adjustments and revisions
aichst	revision history of the likelihood statistics
ao	regARIMA AO outlier component
arat	final adjustment ratios
bct	point backcasts and prediction intervals on the original scale
btr	point backcasts and standard errors for the transformed data
cad	regARIMA calendar adjusted original data
caf	combined adjustment factors
cal	combined calendar adjustment factors
ccal	final combined calendar factors from irregular component regression
cfchst	forecast and forecast error history
chol	combined holiday component
chss	sliding spans of the changes in the seasonally adjusted series
cmpcad	regARIMA calendar adjusted composite data
cmpoad	regARIMA outlier adjusted composite data
cmpori	composite time series data (for the span analyzed)
cmppadj	prior adjusted composite data
cmpspor	spectrum of the composite series
csahst	history of the period to period changes of the adjustments
ctd	final combined trading day factors from irregular component regression
ctrhst	history of the period to period changes of the trend-cycle values
fct	point forecasts and prediction intervals on the original scale
fethst	revision history of the out-of-sample forecasts
fintst	final outlier test statistics
fltsac	concurrent seasonal adjustment filter
fltsaf	symmetric seasonal adjustment filter
fltrnc	concurrent trend filter
fltrnf	symmetric trend filter
frfc	factors applied to get adjusted series with forced yearly totals
ftr	point forecasts and standard errors for the transformed data
idacf	residual autocorrelations for different orders of differencing
idpacf	residual partial autocorrelations for different orders of differencing
indahst	concurrent and revised indirect seasonal adjustments and revisions
indao	indirect additive outlier adjustment factors
indarat	indirect final adjustment ratios
indcaf	indirect combined adjustment factors

Table 8: **Graphics Metafile Codes (continued)**

<b>Code</b>	<b>Description</b>
indcal	indirect calendar component
indchss	sliding spans of the changes in the indirect seasonally adjusted series
indfrfc	factors applied to get indirect adjusted series with forced yearly totals
indirr	indirect irregular component
indls	indirect level change adjustment factors
indmirr	irregular component modified for extremes from indirect adjustment
indmori	original data modified for extremes from indirect adjustment
indmsa	seasonally adjusted data modified for extremes from indirect adjustment
indrsl	final replacement values for SI component of indirect adjustment
indsa	indirect seasonally adjusted data
indsar	rounded indirect final seasonally adjusted series
indsass	sliding spans of the indirect seasonally adjusted series
indsat	final indirect seasonally adjusted series with forced yearly totals
indsf	indirect seasonal component
indsfss	sliding spans of the indirect seasonal factors
indsi	indirect unmodified SI component
indspir	spectrum of indirect modified irregular component
indspsa	spectrum of differenced indirect seasonally adjusted series
indtadj	indirect total adjustment factors
indtrn	indirect trend cycle
indyys	sliding spans of the year-to-year changes in the indirect seasonally adjusted series
irr	final irregular component
irrw	final weights for irregular component
ls	regARIMA level change outlier component
mdlest	regression and ARMA parameter estimates
mirr	modified irregular series
mori	original data modified for extremes
msa	modified seasonally adjusted series
mvadj	original series adjusted for missing value regressors
oad	regARIMA outlier adjusted original data
ori	time series data (for the span analyzed)
oricnt	time series data plus constant (for the span analyzed)
orifctd	series forecast decomposition (SEATS)
otl	regARIMA combined outlier component
pacf	residual partial autocorrelation
padj	prior-adjusted data
padjt	prior-adjusted data (including prior trading day adjustments)
ppradj	permanent prior-adjusted data
ppradjt	permanent prior-adjusted data (including prior trading day adjustments)
pprior	permanent prior-adjustment factors
prior	prior-adjustment factors
ptd	prior trading day factors
regrsd	residuals from the estimated regression effects
rgseas	regARIMA user-defined seasonal component
rhol	regARIMA holiday component
rsi	final replacement values for SI ratios
rtd	regARIMA trading day component
sa	final seasonally adjusted data
sac	final seasonally adjusted series with constant value added
safctd	final seasonally adjusted series forecast decomposition (SEATS)
sar	rounded final seasonally adjusted series
sass	sliding spans of the seasonally adjusted series
sat	final seasonally adjusted series with forced yearly totals
seataf	final combined adjustment factors (SEATS)
seatase	standard error of final seasonally adjusted series (SEATS)
seatcse	standard error of final transitory component (SEATS)

Table 8: **Graphics Metafile Codes (continued)**

Code	Description
seatdsa	differenced final seasonally adjusted series (SEATS)
seatdtr	differenced final trend (SEATS)
seatdty	differenced final trend-cycle (combined trend and transitory component)
seatirr	final irregular component (SEATS)
seatsa	final seasonally adjusted series (SEATS)
seatsf	final seasonal component (SEATS)
seatsse	standard error of final seasonal component (SEATS)
seatssm	sum of final seasonal component (SEATS)
seattcy	final trend-cycle (combined trend and transitory component)
seattrn	final trend component (SEATS)
seattse	standard error of final trend component (SEATS)
setarat	final adjustment ratios (SEATS)
setsac	final seasonally adjusted series with constant value added (SEATS)
settadj	total adjustment factors (SEATS)
settrc	final trend cycle with constant value added (SEATS)
settrns	final transitory component (SEATS)
sf	final seasonal factors
sfctcd	final seasonal component forecast decomposition (SEATS)
sfhst	concurrent and projected seasonal component and their percent revisions
sfr	seasonal factors, adjusted for user-defined seasonal regARIMA component
sfshnk	seasonal factors, before shrinkage applied
sfss	sliding spans of the seasonal factors
sgsac	squared gain of the concurrent seasonal adjustment filter
sgsaf	squared gain of the symmetric seasonal adjustment filter
sgtrnc	squared gain of the concurrent trend filter
sgtrnf	squared gain of the symmetric trend filter
si	final unmodified SI ratios
siox	final unmodified SI ratios, with labels for outliers and extreme values
so	regARIMA seasonal outlier component
spcsir	spectrum of the irregular component (SEATS)
spcssa	spectrum of the seasonally adjusted series (SEATS)
spexrsd	spectrum of the extended residuals (SEATS)
spir	spectrum of modified irregular series
spor	spectrum of the original series
sprsd	spectrum of the regARIMA model residuals
spsa	spectrum of differenced seasonally adjusted series
tadj	total adjustment factors
tc	regARIMA temporary change outlier component
tdss	sliding spans of the trading day factors
tprior	temporary prior-adjustment factors
trancmp	regARIMA transitory component
tranfcd	final transitory component forecast decomposition (SEATS)
trn	final trend cycle
trnfctd	final trend component forecast decomposition (SEATS)
trnhst	concurrent and revised Henderson trend-cycle values and revisions
tssac	time shift of the concurrent seasonal adjustment filter
tstrnc	time shift of the concurrent trend filter
usrdef	regARIMA user-defined regression component
xcal	final calendar factors from irregular component regression
xhol	final holiday factors from irregular component regression
xtd	final trading day factors from irregular component regression
xtrm	final extreme value adjustment factors
yyss	sliding spans of the year-to-year changes in the seasonally adjusted series
